

green cargo

The Swedish state owned logistics company Green Cargo transports goods nationally and internationally, mainly by train. They work to promote sustainable development and through Synergi® reducing risk both with regards to financial and human factors.

Benefits of Synergi® for Green Cargo

- The calculated costs of Green Cargo's possible accidents have gone down from 24 MSEK in 2002 to estimated 11 MSEK in 2006.
- The Green Cargo safety index – a product of Synergi®-data – has improved from 88,1 in 2002 to 92,5 in 2005. Behind this progress is a reduction of both serious accidents and incidents with low risk.
- Through Synergi® the valuable database of near-miss accidents and accidents now contains ca. 7.000 entries. These are searchable for Green Cargo's employees for them to learn and seek alternative solutions when HSEQ problems occur.

"Some of the decisions I make are very important as both lives and huge sums are at stake when dealing with traffic safety. As Synergi® provides hard facts about the reality of things, it is easier to get my point across and it has made me more secure in my decisions."

Mr. Håkan Sjöström, Safety Director, Green Cargo AB.

It would not be possible to exploit the full potential of Synergi® without the cooperation between Green Cargo and Synergi Solutions' consultants. For Synergi Solution' consultants, risk managing is not only about a technical system, but also a mindset concerning HSEQ as such.

Green Cargo qualifies Synergi® as a highly competent HSEQ system. As part of the statal Swedish Railroads (SJ), Green Cargo chose Synergi® amongst other risk managing systems when SJ was divided into various independent companies in 2001. Synergi® has now spread to many other companies that previously made up SJ, as they are still cooperating in many ways and Synergi® makes communication on HSEQ much smoother.

About Green Cargo

3.150 employees in over 100 locations throughout the Nordic region and Europe.

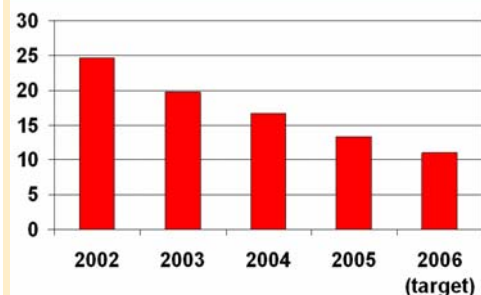

Challenge

Lack of any proper tool for reporting and handling accidents and near-miss accidents in one common system for several departments.

Solution

Implementation of the software Synergi® for gathering all relevant information in one database, providing a brand new possibility of setting goals for improval.

Costs of shunting accidents, MSEK 

With Synergi®, the calculated costs of Green Cargo's possible accidents have gone down almost 50% in four years, from 24 MSEK to estimated 11 MSEK in 2006.

Synergi Solutions AS is always actively involved in assisting their customers putting Synergi® into proper use at all stages. Our HSEQ consultants have considerable experience from oil and offshore, transport and communications, the process industry, the building and construction industry and the public sector, in addition to knowing Synergi® from A to Z.
