

Kemira

Kemira produce pulp and paper chemicals, water chemicals, paint, coatings and industrial chemicals. Environment and safety are essential for Kemira’s business operations. They are committed to a high level of Corporate Responsibility and Synergi® is a part of enabling Kemira to maintain this high standard.

Benefits of Synergi® for Kemira

- Helps reduce the amount of LTAs.
- Increase in the amount of cases reported.
- Smaller losses and actual return on investment.
- Eases corporate reporting.
- Accessible to all Kemira employees.
- One common software platform eliminates the need to develop and maintain local software.
- Adaptable to corporate requirements.
- Multilingual: English, Finnish and Swedish are all used.

“Synergi® is forcing users at various sites to handle accidents and non-conformities in a systematic way. Synergi® also compels users to engage in more detailed analysis and follow-up. This is a definite strength of the program.”

Mr. Pieter Jan Bots, Safety Manager, Kemira Plc

Synergi® was adapted to suit Kemira’s operations. The need of an international / Finnish chemical company were considered and Synergi® was re-configured to meet these needs. The Kemira model has changed considerably from what it originally was. One big change was the translation of the program into Finnish. This increased the functionality and usability of the program significantly.

About Kemira

Employs more than 7100 people in 39 worldwide locations. Had a turnover of € 1.695 million in 2004.

Challenge

Various safety management and data collection systems used. No uniformity in procedures.

Solution

With the implementation of the software Synergi® Kemira streamlined their operations and brought all locations under one system.

“In our safety management system, Synergi® is an important tool. We want to see our employees going home safe and healthy every day. This requires attention to safety all the time and Synergi® supports us in achieving this goal.”

Mr. Pieter Jan Bots, Safety Manager, Kemira Plc
