

ProRail

Synergi® for Dutch rail safety

ProRail, the infrastructure manager of the Dutch railway network, relies on Synergi® to support their principal task: ensuring capacity, reliability and safety on and around the tracks.

Benefits of Synergi® for Prorail

- All relevant data concerning incidents, audits and inspections on a national basis is registered in Synergi®. This makes ProRail able to keep better track of investigations and the outcome of the improvement actions taken.
- By providing insight into what the main risks are, Synergi® contributes to the efficiency ProRail needs when daily guiding over one million passengers and 80,000 tons of freight into the right direction.

"If you don't know the details and if you can't measure what's happening, how can you do anything about it? With Synergi® we can keep track of the incidents and find the right measures to improve the situation."

Mrs. Linda Wright, Safety Advisor/Analyst in ProRail

ProRail implemented Synergi® in January 2005. The transition from their old database to Synergi® was performed smoothly and the migration of historical data enabled ProRail to build on data from previous years. Though the managers and the board are very well satisfied with the way the system works and how they can all share knowledge, they wish to further develop the company's use of the software and have therefore bought a Corporate Licence. This means that all ProRail employees will be able to extract information from the system.

ProRail sees Synergi® as particularly useful because the follow up of all incidents is guaranteed as there is no way of closing a case before it has been dealt with in a proper way. A monthly report based on the Synergi® data provides the basis for the work of all Safety Advisors.

About Prorail

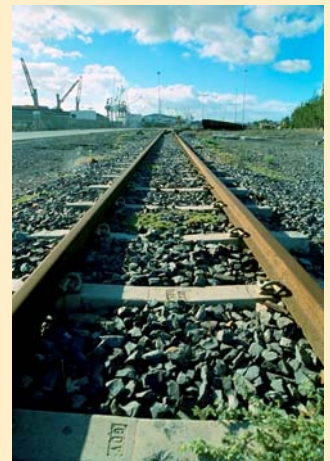

Maintains and expands the Dutch railway infrastructure now covering more than 6,500 kilometres of tracks all over the Netherlands. Employs around 2600 people.

Challenge

A previous system from where minimal data was entered, investigations and audits were often not followed up because there was no reminder and it was difficult to extract data as the database contained double information.

Solution

Implementation of the software Synergi®. Most packages are either very good on output or input. Synergi does both.

Synergi Solutions AS is always actively involved in assisting their customers putting Synergi® into proper use at all stages. Our HSEQ consultants have considerable experience from oil and offshore, transport and communications, the process industry, the building and construction industry and the public sector, in addition to knowing Synergi® from A to Z.
