

Subsea7 offers the oil & gas industry global expertise, resources and technology to enable sub sea operations. Our deep-rooted health, safety, quality and environmental culture is inherent in all we have achieved to date and will remain the pivotal foundations of performance as Subsea7 continues to develop its position as global contractor.

Benefits of Synergi® for Subsea7

- Increased client confidence.
- Quick data capture and case closure.
- Easily accessible live central database.
- Increased transparency in operations.
- Increase in confidence in company statistics and provable results.
- Demonstrates high level of commitment to organisational development.

“Synergi® is a powerful tool which enables us to capture HSEQ (*Health, safety, environment and quality*) incident details and all supporting documentation in one location. Capturing all our incidents in one database supports our management review process ensuring suitable and expedient closure of all incident corrective and preventative actions. Synergi® also supports our statistical requirements ensuring our global management have accurate data on the company HSEQ performance.”

Mr. Dave Munro, Principal HSE Adviser, Subsea7

Subsea7 chose Synergi® to be their HSEQ management tool. Subsea7 have a healthy HSEQ culture as demonstrated by a reduction in its LTI (*Lost Time Injuries*) frequency rate from 0.48 to 0.02 in 4 years and with Synergi® as an integral part of making this happen there are statistics to prove it!

About Subsea7

Employs 3000 people world wide, with locations in the North Sea, Brazil, Asia Pacific, Gulf of Mexico, West Africa.

Challenge

High risk and adverse operating environment. Target of zero LTIs.

Solution

Implementing Synergi®, thus enabling Subsea7 to communicate in an efficient way, saving time. Increased levels of communication lead to higher transparency which in turn enables each individual section of the organisation to make improvements.

Example:

If a vessel has an incident regardless of what region it is working in the incident details are logged by the vessel management offshore on to Synergi®. An immediate incident notification is sent out to all other worksites and as everyone in Subsea7 has access to Synergi®, and as the database is live, the case details and lessons learnt are instantly available allowing immediate experience transfer.
